

REACTOR

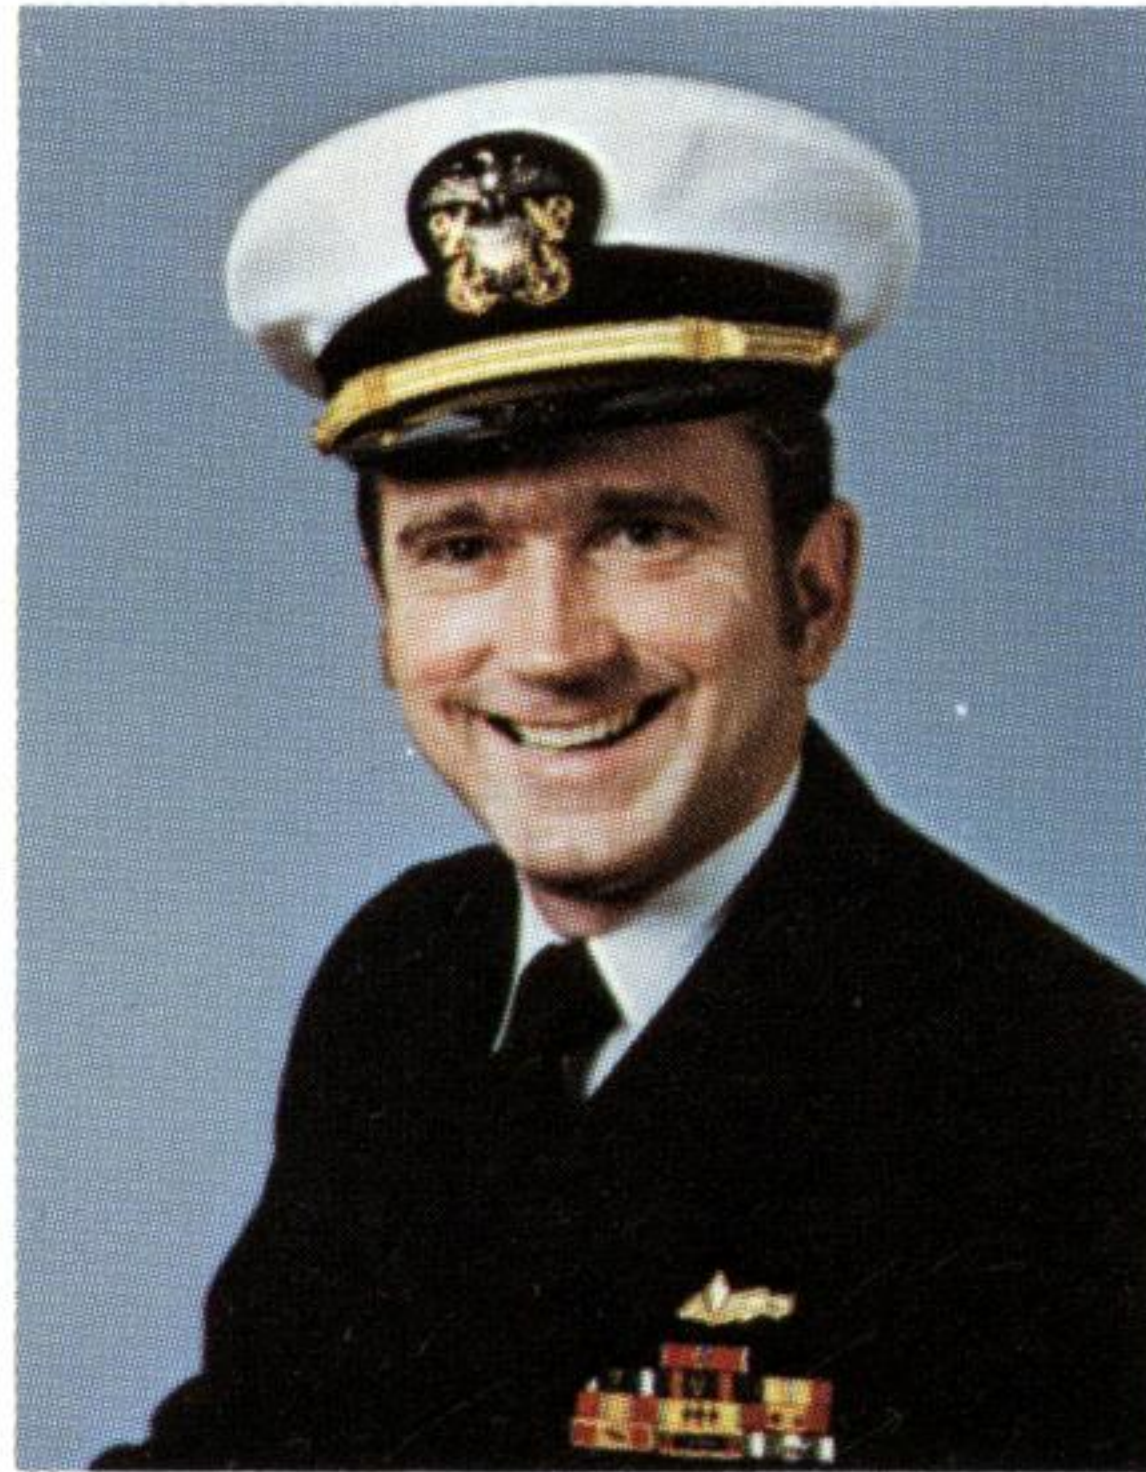

Night and day, at sea and at anchor, the nuclear trained officers and enlisted men of the Reactor Department stand watch over one of the most sophisticated nuclear propulsion plants in the world.

These members of the ship's crew maintain a constant, never-ending vigil. The mobility and versatility of NIMITZ are the result of conscientious watchstanding and diligent preventive and corrective maintenance. The NIMITZ

propulsion plant has never failed to enable the ship to meet all operational commitments. The Reactor Department personnel are proud of this record. Their impressive performance, as indicated by an "Above Average" score on the recent Operational Reactor Safeguards Examination, is the result of close teamwork among the five Reactor Department divisions.
